T. E. DRAKE, EXETER,

Clerk to the Visitors.

REPORT OF THE COMMITTEE OF VISITORS.

Epiphany Sessions, 1867

The general state of the Asylum has been during the past year in all respects satisfactory, but we regret to say it did not escape the epidemic, which prevailed not only in Exeter and its neighbourhood, but in different parts of the County. It broke out with violence in the male side of the building, on the 28th of September, and from that time until the 9th of November, when the last case occurred, there were 45 attacks of Cholera and Choleraic Diarrhœa, and 30 deaths. We are unable to discover any causes for so sudden an outbreak, or any mode by which infection could be conveyed to the Asylum.

The patients had been up to that time in general good health. The wards were clean and in good order, and the drainage without obstruction. The water used in the infected wards, and the other parts of the Establishment has been by our directions analysed by Professor Voelcker, who states, that as far as chemical analysis is capable of throwing light on the quantities, it has to be regarded as unusually pure and wholesome drinking water, and unusually free from organic impurities.

These matters were therefore satisfactory. But the fatal character of the disease, and the small proportion of recoveries to the number of attacks, may we think be accounted

for by the fact that the patients attacked, were with few exceptions Idiots, Imbeciles, and persons of debilitated constitution, and it was found in such cases impossible to arrest the progress of the disorder.

At our Meeting which took place three days after the first outbreak, we directed that the patients should at once be removed from the infected wards, and we provided a Hospital for the sick, in a part of the detached Building on the male side. We also directed the use of disinfectants, and that every source of pollution should be removed by the bedding and linen being burnt. It also became our duty to provide a Hospital for the female patients, in case the disease should appear amongst them, and we ordered for that purpose immediate erection of a detached temporary Building, which we were enabled to construct with the materials then on the premises.

We are happy to state, however, that no case occurred in the Female Wards, which have been healthy and free from any epidemic disease, and the temporary building may be now converted into a Sick Ward if hereafter it should be required, or applied to some other useful purpose.

The cost of this building will not exceed £100.

Before concluding this part of our report it is our duty to state, that in our opinion the fullest care and attention was bestowed upon the Sick, and that the exertions of the Attendants by night and day were unremitting. At the same time we have every reason to think that all that could be done by medical skill and treatment was effected by the Medical Superintendent, Dr. Saunders, and the Medical Assistant, Mr. Stuckey.

The deaths occasioned by this fatal disorder, and the removal of 28 patients to the Exeter Workhouse, have to some extent relieved the pressure of numbers.

There are now in the Asylum 643 patients, viz: 254 males, and 389 females.

We shall shortly be enabled to remove to the farm 20 working patients, who now occupy one of the wards in the main building, and this ward will then be available for female patients.

The number of admissions during the year have been 153 ; that of deaths, 104 ; and of discharges, 95. At Lady-day last we found it necessary in consequence of the advanced price in provisions and clothing to increase the weekly charge from 9s. 6d. to 10s. But in October last we found we were able to reduce it again to 9s. 6d. per week, at which sum the weekly charge now remains.

The further sum of £2000 of the Building Debt has been paid off during the past year, which is now reduced to £8000.

The Contract which we entered into seven years since with the Borough of Plymouth expired on the 9th of September last, and we have extended it for a short time, with the sanction of the Secretary of State, in order to allow us an opportunity of considering whether it is desirable to enter into a further Contract for a term of years for the care and maintenance of their patients.

After a full consideration of the subject, we have come to a resolution that the Contract might be renewed with advantage for ten years, and we are fully prepared on our part to agree to it ; but it will be necessary for that purpose to convert into Wards a part of the building lately used as a coach-house, and to make some other necessary alterations and perhaps additions.

The proposals are now before the Secretary of State and the Commissioners in Lunacy, and we must wait their approval before we can proceed to a definite arrangement.

The Asylum Farm is in a most satisfactory state, and has fully answered our expectation. All the farm buildings which it is proposed to erect at present are finished, with the exception of the additional Wing for the working patients, which has been delayed by the erection of the

Cholera Hospital, but we hope the whole will be completed before Midsummer.

We have now 20 cows on the farm which supply the Asylum entirely with milk and a very considerable part of the butter.

The Accounts of the farm and the General Annual Account will be presented as usual to the Court at the next Quarter Sessions.

Mr. Stuckey, the Medical Assistant, having sent in his resignation, Mr. Richards has been appointed to succeed him.

We have only in conclusion to remind the Court that it is their duty to appoint at these Sessions the Visitors for the year ensuing.

SAML. TREHAWKE KEKEWICH,

Chairman.

TWENTY-FIRST ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT.

The Medical Superintendent has the honor to submit to the Visitors the Twenty-first Annual Report, accompanied by the Statistical Tables.

During the year 1866, 152 patients have been admitted, of whom 79 were males, and 73 were females.

The discharges during the year have been 95, of whom 39 were men, and 56 were women; of these, 63 were discharged recovered.

The deaths during the same period have been 104; males 70; females 34. The total number of patients under treatment during the year has been 842.

The following Table shews the changes which have occurred in the Asylum during the year.

			Males.	Females.	Total.

No. deemed curable on Dec. 31, 1866	...		15	18	33

The recoveries have been 41·44 per cent. on the admissions.

The death rate has been 15·43 per cent. on the average number of patients resident during the year ; 25·45 per cent. on the males ; and 8 per cent. among the females.

The following is a summary of the chief causes of death, details of which will be found in the Obituary Table :

Cholera, 30 ; Diarrhœa, 2 ; Phthisis, 16 ; other Chest Affections, 6 ; General Paralysis, 16 ; Cerebral Diseases, 15 ; Old Age and Natural Decay, 8 ; other causes, 11 ; On comparing the death rate with that in former years, it will be seen that the per centage of deaths among the Males is nearly double the average of what it has been since the opening of the Asylum ; this is due to the serious outbreak of Cholera which visited the Asylum during the past autumn.

The health of the patients during the Summer had been good, and up to the date of the outbreak there was a comparative immunity from diarrhœa, although the Asylum was much crowded in both divisions, and cholera and choleraic diarrhœa prevailed in the adjoining districts. On the 28th of September, two idiots, brothers, who had been in the Asylum nearly twenty years, in Male 5 Ward, the one set apart for idiots, paralytics, and feeble patients, were attacked with Cholera in its most virulent form ; how the disease was imported, or in what way these patients first came in contact with the germs of the cholera poison is unknown, although the greatest care has been taken to clear up the mystery on this point. No patient from an infected district had been admitted. The disease rapidly spread and patients were attacked in every Ward on the *male* side, with the exception of the detached male new house situated on the hill above the main building. From the date of the outbreak to the 9th of November, when the last case of cholera occurred, 45 male patients were attacked with cholera and choleraic diarrhœa, and of this number 30 died. Those attacked were chiefly idiots, general paralytics, and demented, they were for the most part aged and infirm, and had been long resident in the Asylum. Not a single patient

engaged in outdoor pursuits was attacked with the disease, neither were any of the attendants. The small proportion of recoveries may at first sight appear unfavourable when compared with the results of treatment among the sane, but when the slight power of resisting disease possessed by the worst class of our insane population is considered, (together with the difficulties presented in treatment, arising partly from the peculiarities of the patients themselves), also our unsatisfactory knowledge of the origin, nature, and medical treatment of the disease, we cannot wonder at the sad fact that the male population of our Asylum was more than *decimated* in the short period of six weeks.

The fact that the disease was confined to one sex is remarkable, and is only one out of many instances recorded by medical writers where amongst large bodies of men and women living apparently under the same conditions, and under the same roof, some times indeed with only a partition wall between them, one sex has been decimated by cholera, while the other has remained entirely exempt.

This strange result may be accounted for by the fact that in this establishment the latrines for either sex, are devoted to their exclusive and separate use. The contamination of the latrines by the rice water discharges of the first casual case, explains at once the mystery.

A detailed account of the symptoms and treatment of the disease would be unsuited to the limits and object of an Annual Report. The disease was at first of a more virulent type than during the middle period, and again became worse towards the end of October.

The following is a summary of the measures adopted to isolate as far as possible the infected patients, and arrest the spread of the disease among the healthy.

1. An *observation room* was set apart for the reception of all patients attacked with diarrhoea, and suspected cases.

2. Two dormitories at the detached male new house were converted into a cholera ward. A temporary staircase, external to the building was erected, and internal communication

with other parts of the building was cut off by a partition. All cases of decided cholera were at once sent to this ward.

3. All closets and utensils were thoroughly disinfected, and cleansed twice a day, oftener if necessary.

4. All excreta, vomit, as well as dejections, were received into vessels containing chloride of lime, carbolate of lime, or Sir W. Burnett's fluid. When passed on the floor they were at once covered with disinfectants, and removed without delay. A deep trench was dug in which the excreta were buried.

5. The attendants were directed to watch the patients narrowly, and report to the Superintendent, or Assistant Medical Officer, any patient seen going to the closet more than once a day, also to report the first symptoms of diarrhæa or vomiting.

6. All linen or mattresses tainted with the discharge to be burnt.

7. The hands of all attendants on the sick to be scrupulously cleaned, whenever they have become soiled by "rice water," by washing in "Condy's fluid."

8. Special attention to be directed to the feeding and clothing of all the patients.

9. An extra allowance of meat was ordered for every patient in the Asylum, and other extras according to circumstances.

10. Convalescents to be kept some time separate from the healthy patients.

11. The friends of patients were not allowed to visit the Asylum.

12. The patients in the ward where the disease first broke out, were removed to No. 6 ward, and the patients in that ward were accommodated in the chapel, which was fitted up as a dormitory containing 36 beds. Every gallery, day room, and dormitory, with closets, &c., were thoroughly white-washed and disinfected throughout the asylum.

13. A temporary cholera hospital for the women, according to a plan submitted to the Visitors by the Superintendent, was erected. It consists of a wooden building 60 by 20 ;

12 feet to the eaves, and 25 feet to the centre, accommodating 20 patients, allowing to each patient 1000 cubic feet. In design and construction it is similar to the military wooden hut or hospital.

14. A *qualitative* and *quantitative* analysis of the water was made by Professor Voelcker, who reported that it was "unusually pure and wholesome drinking water," "and unusually pure as regards organic impurities."

In the Appendix (Tables 12, 13) will be found the detailed tabular statement of the analyses.

The Superintendent has great pleasure in recording the praiseworthy manner in which the several attendants performed their arduous duties during the recent epidemic, and also in acknowledging the support and valuable assistance afforded at a time of great trial and anxiety by all the Officers of the Establishment, especially the unremitting exertions of Mr. Stuckey, the late Assistant Medical Officer.

In the Appendix more detailed Medical Statistics have been for the first time inserted in accordance with the recommendation of the Commissioners in Lunacy and the Medico-Psychological Association. The object of these tables is to obtain a uniform system of Statistics in all Asylums, and thus facilitate a comparison of the general results of treatment, &c, since the opening of the Asylum, with those in similar institutions.

Your Superintendent desires to draw especial attention to the inaccuracy and deficiencies in a large proportion of the Medical Certificates of the Admission papers, and the inconvenience and difficulty which arises in obtaining the necessary amendments to make the orders valid. During the past year more than 20 per cent. of the admission papers were returned for amendment. The most frequent omissions are—1st, the omission of the legal medical qualification of the Certificant; *e.g.* "Physician," "Surgeon," or "Apothecary," is frequently inserted instead of "Member of the Royal College of Physicians" or "Surgeons," "Licentiate of the Apothecaries' Society," &c., as the case may be.

The 2nd, and still more important case, is the vagueness

and insufficiency of facts *stated* as being *observed by the medical man at the time of examination*. To illustrate this, what may be termed "*bad or insufficient facts*," are contrasted with "*good facts*" being taken in each case from recent admission papers. To the first class belong the following facts (?) indicating insanity—"Great prominence of the eyeball;" "Is in a state of great excitement and rage;" "Great rigidity of legs and arms;" "From his general conformation, manner, and behaviour;" "He has previously been in confinement and under treatment as a Lunatic in the County Asylum;" "Tells me he has bad thoughts and could not help it;" "Violence of speech and action, want of sleep."

Good facts.—"Believes she has the cattle plague;" "expresses a desire to destroy his life;" "fancies she is the sister of our Saviour;" "fancies himself pursued by the devil;" "fancies that people put paraffin through a creak in the door to poison her;" "says he is constantly electrified, and that he has found out a new method of holding conversation with people at a distance, without the aid of any apparatus;" "has without cause taken a great dislike to his wife and mother, of whom he used to be very fond."

The occupations, amusements, and treatment of the patients has been the same as in former years.

In conclusion your Medical Superintendent begs to thank the Visitors for their continued confidence and kind support during the past year of trial and extreme anxiety.

(Signed)

G. SYMES SAUNDERS, M.B. (LOND.)

Medical Superintendent.

TABLE No. 12.

Composition of two samples of Water sent by Dr. Symes Saunders, County Lunatic Asylum, Exminster.

	Well.	Water marked from Tap in No. 5 Ward.
An Imperial Gallon on evaporation left Residue, dried at 260° Fahr.	16·61	16·95

An Analysis of the residue gave by direct determination.

Organic matter and loss in heating	1·39	1·40
Oxides of Iron and Alumina, traces of Phosphoric Acid	·24	·25
Lime	3·11	3·24
Magnesia	1·46	1·49
Sulphuric Acid	·72	·74
Chlorine	2·20	2·21
Soluble Silica	·90	·81
Alkalies & Carbonic Acid (not determined separately)	6·59	6·81
Total residue per Gallon	16·61	16·95
Oxydisable Organic matter per the Gallon	·176	·272

AUGUSTUS VOELCKER.

11, Salisbury Square, Fleet Street E.C.
November 2nd, 1866.

TABLE No. 13.

According to the usual mode of combining the constituents of Waters the composition of the two samples may be represented as follows:

General Composition of two samples of Water, in use in the Devon County Lunatic Asylum, Exminster.

An Imperial Gallon contains in grains :

	Well Water.	Water from Tap in No. 5 Ward.
*Organic matter and loss in heating	1·39	1·40
Oxides of Iron and Alumina, and traces of Phosphoric Acid	·24	·25
Sulphate of Lime	1·22	1·25
Carbonate of Lime	4·66	4·87
Carbonate of Magnesia	3·06	3·11
Chloride of Sodium	3·62	3·63
Carbonates of Potash and Soda	1·52	1·63
Soluble Silica	·90	·81

16·61grains. 16·95grains.

*Including oxydisable Organic matter ·176 | ·272 |

AUGUSTUS VOELCKER, Ph. D.,

Professor of Chemistry to the Royal Agricultural Society of England

11, Salisbury Square, Fleet Street,
Nov. 2nd, 1866.
